

Watts Specification Programs

At Watts it's our ongoing commitment to bring value added specification programs and resources to the design community. Below are some of the programs and materials we offer online.

ATS "Allied Technical Services"

ATS is an independent No-Cost, No-Catch Plumbing Specification Program sponsored by Watts and provided to all design firms in the United States and Canada. ATS ensures a design firm's project and master specifications are automatically updated when products are modified or discontinued. Specifications are made available by commercial and/or product applications in Word, PDF, or Excel formats (ex. Long Spec, Short Spec, Division 15, Division 22, etc.). These specifications have the ability to include AutoCAD blocks, combined 3D BIM "Building Information Modeling" nested files and LEED "Leadership in Energy & Environmental Design" calculation tools. ATS is a free service.

Product MasterSpec Specifications

Arcom's MasterSpec documents are licensed to Watts in Master Format '95 (division 15) & Master Format '04 (division 22) and approved by the American Institute of Architects. These documents are beneficial in their ability to supply design firms the correct language and products needed to create or update their MasterSpec documents on file. These documents not only save the firm unnecessary expenses but endless hours of corrections that go into keeping a set of specifications up to date.

CAD Drawings

Add depth to your project. The AEC community can preview and download 2D, 3D, and Revit files in a variety of industry formats from our online library. Our 3D and Revit files are designed for use in Building Information Modeling (BIM) applications.

USA: No. Andover, MA • Tel. (978) 688-1811 • Fax: (978) 794-1848 • www.watts.com

L.E.E.D. "Leadership in Energy & Environmental Design"

As the USGBC "United States Green Building Council" and the CAGBC "Canadian Green Building Council" continues to revise the LEED rating system for sustainable building design, Watts continues to take all measures to keep our LEED product documents current. These documents highlight where our products have the potential to help the design community acquire credits in the design and construction of "green" sustainable buildings.

Autodesk Seek

Is a web service that allows the AEC community to search and find manufacturer specific building products and associated design content. This content includes 2D, 3D, Revit CAD drawings and specifications. Design firms have the ability to download these files in Autodesk, Revit, or AutoCAD software.

Specification Sheets

View and download engineering specification sheets for Watts' products.
