Quick-Guide to Identifying Lead Free* Products

Beginning in 2009, all Lead Free products from the brands of Watts Water Technologies will begin to transition to new labels that clearly identify them as Lead Free (see samples below). This will allow anyone to easily distinguish standard from Lead Free product. Some products will also carry an identifying marker on their body. Where we offer both a standard model and a Lead Free model of the same product, we will add the prefix "LF" to the Lead Free model number.

Ex. Standard Model: 25AUB-Z3 Lead Free Model: LF25AUB-Z3

If an item is only offered in Lead Free materials, the model number shall remain the same and will not contain an "LF" prefix.

*The wetted surface of Lead Free products contacted by consumable water contain less than one quarter of one percent (0.25%) of lead by weight.
